What is IVF?

- IVF stands for In Vitro Fertilization.
- It is an assisted reproductive treatment.
- In IVF, fertilization takes place outside the body in a laboratory setting.
- The resulting embryo may then be transferred to the uterus as advised by the fertility specialist.

by Elpis IVF Clinic

Why is IVF Considered?

IVF may be considered in situations involving:

- Difficulty conceiving naturally
- Certain fertility-related conditions
- Problems affecting the fallopian tubes
- Male-factor fertility concerns
- Unexplained infertility
- Other circumstances identified by a fertility specialist

Basic IVF Process

The IVF journey generally involves:

1. Initial fertility evaluation
2. Ovarian stimulation
3. Monitoring
4. Egg retrieval
5. Sperm collection
6. Fertilization
7. Embryo development
8. Embryo transfer
9. Pregnancy testing

by Elpis IVF Clinic

Fertility Evaluation

Before treatment, a specialist may evaluate:

- Medical and reproductive history
- Hormonal factors
- Ovarian function
- Sperm-related factors
- Uterine and reproductive health
- Previous fertility treatments

by Elpis IVF Clinic

Egg Retrieval and Fertilization

- Medication may be used to stimulate the development of eggs.
- Eggs are collected through a medical procedure.
- Sperm is collected and assessed.
- Eggs and sperm are combined using appropriate laboratory techniques.
- Embryos are monitored during development.

by Elpis IVF Clinic

Embryo Transfer

- An embryo selected by the fertility team may be transferred into the uterus.
- The timing and approach depend on the individual treatment plan.
- Pregnancy is subsequently evaluated through appropriate testing.

Choosing an IVF Clinic in Pune

- When considering an IVF clinic, patients may look at:
- Qualified fertility specialists
- Laboratory facilities
- Treatment approach
- Patient counselling
- Monitoring and follow-up
- Transparency regarding treatment and costs
